The present sequence represents a multi-epitope peptide which is used as a new immunotherapeutic agent. It comprises T cell epitope regions from 2 or more different allergens (preferably linked via arginine or lysine dimers), where the T cell epitope regions: have a positivity index greater than 100 as measured in a patient group responding to the allergen; have at least 70% reactivity with lymphocytes from patients responding to the allergen; and are not reactive with immunoglobulin E responding to the allergen; and are not reactive with immunoglobulin E (IgE) antibodies from patients responsive to the allergen. The agent can be used to prevent and treat a wide variety of allergic diseases, e.g. by desensitisation. Side effects, e.g. those mediated by IgE, are reduced.

                                                                                                                                              The present sequence represents a multi-epitope peptide which is used a a new immunotherapeutic agent. It comprises T cell epitope regions from or more different allergens (preferably linked via arginine or lysine dimers), where the T cell epitope regions: have a positivity index greater than 100 as measured in a patient group responding to the allergen; have at least 70% reactivity with lymphocytes from patients responding to the allergen; and are not reactive with immunoglobulin E (19E) antibodies from patients responsive to the allergen. The agent case used to prevent and treat a wide variety of allergic diseases, e.g. desensitisation. Side effects, e.g. those mediated by 19E, are reduced.

The peptide can be used in an antisugipollinosis agent. AAF59011 to AAF59062 and AAB69094 to AAB69121 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel peptide and its use

The peptide can be used in an antisugipollinosis agent. AAP59011 to AAF59062 and AAB69094 to AAB69121 represent sequences used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A linked T cell epitope peptide - used for the treatment sugi-pollinosis % \left\{ 1\right\} =\left\{ 1\right\} =\left
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW80339-58 represent epitopes for T cells, derived from the sugiallergen proteins Cryj1 (AAW80339-44, AAW80350-53 and AAW80356-58) ar Cryj2 (AAW80345-49 and AAW80354-55). The peptides are useful for the treatment of sugi-pollinosis, an allergic reaction of the body to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 10; Page 5; 21pp; Japanese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 1998-577037/49
                                     The present invention describes a method for chemically synthesising a peptide by solid phase synthesis. The method comprises processing a carrier resin to which the C-terminal amino acid derivative of the target peptide has been preliminarily bonded is characterised by adding a protective group to inactivate a part of alpha-amino groups of an amino acid capable of undergoing a peptide extension reaction on the carrier resin. The method is useful for synthesising a peptide by solid phase synthesis. Tong chain peptides can be readily synthesised in with a high success ratio without using the segment condensation method or gene manipulations. The present sequence represents an amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17-JAN-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide synthesis; chemical synthesis; solid phase synthesis.

                                                                                                                                                           The present invention describes a method for chemically synthesising a peptide by solid phase synthesis. The method comprises processing a carrier resin to which the C-terminal amino acid derivative of the target peptide has been preliminarily bonded is characterised by adding a protective group to inactivate a part of alpha-amino groups of an amino acid capable of undergoing a peptide extension reaction on the carrier resin. The method is useful for synthesising a peptide by solid phase synthesis. Long chain peptides can be readily synthesised in with a high success ratio without using the segment condensation method or gene manipulations. The present sequence represents an amino acid peptide sequence given in an example from the present invention.

                                                                                                                                                                                                                                                                 The present invention describes a method for chemically synthesising a peptide by solid phase synthesis. The method comprises processing a carrier resin to which the C-terminal amino acid derivative of the target peptide has been preliminarily bonded is characterised by adding a protective group to inactivate a part of alpha-amino groups of an amino acid capable of undergoing a peptide extension reaction on the carrier resin. The method is useful for synthesising a peptide by solid phase synthesis. Long chain peptides can be readily synthesised in with a high success ratio without using the segment condensation method or gene manipulations. The present sequence represents an amino acid peptide sequence given in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for chemically synthesising a peptide by solid phase synthesis. The method comprises processing a carrier resin to which the C-terminal amino acid derivative of the target peptide has been preliminarily bonded is characterised by adding a protective group to inactivate a part of alpha-amino groups of an amino acid capable of undergoing a peptide extension reaction on the carrier resin. The method is useful for synthesising a peptide by solid phase synthesis. Long chain peptides can be readily synthesised in with a high success ratio without using the segment condensation method or gene manipulations. The present sequence represents an amino acid peptide sequence given in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chemically synthesizing a peptide by solid phase synthesis by adding protective group to inactivate part of alpha amino group of an amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kawaguchi J,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             21-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide synthesis; chemical synthesis; solid phase synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Artificial sequence designed peptide #23.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a peptide, its complex, derivative or its polymerizate, where the peptide (I) has a formula of: alpha1-alpha2-alpha3-alpha4-alpha5-alpha6-alpha7 where alpha1 to alpha7 = amino acid sequence selected from amino acid sequences ranging from 11-19 amino acids derived from T call epitopes derived from cedar (japanese cedar - Cryptomeria japonica) pollen allergens. The peptide can be used in an antisugipollinossis agent. AAF59011 to AAF59062 and AAB69094 to AAB69121 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 5; Page 33-34; 75pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cryptomeria japonica.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cedar pollen allergen T cell epitope derived protein SEQ ID NO:53.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB69119 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          alpha1-alpha2-alpha3-alpha4-alpha5-alpha6-alpha7
where alpha1 to alpha7 = amino acid sequence selected from amino acid sequences ranging from 11-19 amino acids derived from T cell epitopes derived from cedar (japanese cedar - Cryptomeria japonica) pollen allergens. The peptide can be used in an antisugipollinosis agent.

                                                                                                                                                                              The present invention describes a peptide, its complex, derivative or its polymerizate, where the peptide (I) has a formula of: alpha1-alpha2-alpha3-alpha4-alpha5-alpha6-alpha7 where alpha1 to alpha7 = amino acid sequence selected from amino acid sequences ranging from 11-19 amino acids derived from T cell epitopes derived from cedar (japanese cedar - Cryptomeria japonica) pollen allergens. The peptide can be used in an antisugipollinosis agent. AAF59011 to AAF59062 and AAB69094 to AAB69121 represent sequences used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Perfect score:
                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                 115.5
